Model Documentation of the Roessler Attractor - Equation 1 of 1979

This document was automatically generated based on the ACKREP project system model with FD5RW. The Automatic Control Knowledge Repository, short ACKREP, aims to facilitate knowledge transfer of control theory and control engineering.

1 Nomenclature

1.1 Nomenclature for Model Equations

$a,\ b,\ c$ constants

2 Model Equations

State Vector and Input Vector:

$$\underline{x} = (x_1\ x_2\ x_3) = (x\ y\ z)^T$$
$$\underline{u} = \emptyset$$

Model Equations:

$$\dot{x}_1 = -y - z \tag{1a}$$
$$\dot{x}_2 = x + ay \tag{1b}$$
$$\dot{x}_3 = bx - cz + xz \tag{1c}$$

Parameters: $a,\ b,\ c$
Outputs: *⟨not defined⟩*

2.1 Exemplary parameter values

Symbol	Value
a	0.38
b	0.3
c	4.84

3 Derivation and Explanation

Not available
